- **General Virtual Faxing**
- **Mortgage Applications**
- **Insurance Claim Forms**
- **Application Response**
- **Conference Registration**
- **Order Collections**
- **Surveys Results**
- **Seminar Registration**
- **Subscription Requals**
- **Timesheet Collections**

Odyssey's Inbound Fax Solution takes a more modern approach to the collection and distribution of faxed documents.

Odyssey provides a secure, web-based folder to receive inbound faxes for your entire office, and can also automatically route faxes to individual email addresses. This solution can be used as a secure and efficient replacement to standard fax machines.

Odyssey's Inbound Fax Solution Features:

▶ Fax-To- Folder

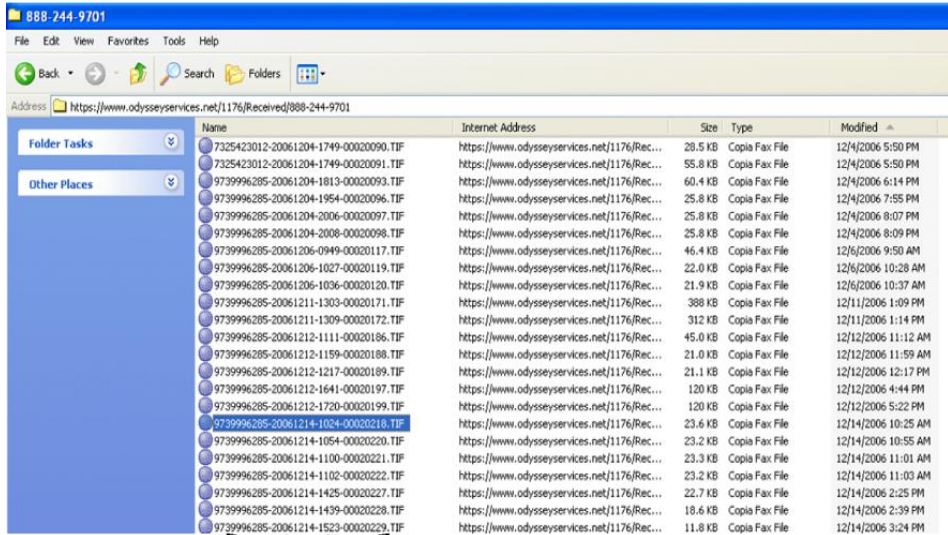

- **Folder access:** These desktop folders look similar to a Windows folder and access is similar to existing applications such as Windows Explorer, Microsoft Office and other applications that support the WebDAV protocol. As with Windows Explorer, files can be listed, opened, printed, copied, or deleted using a familiar folder or directory view.
- **Multiple user (workgroup) access:** Entire workgroups can share the responsibility of processing received documents. For added security, Odyssey can provision each team member with a login ID and password so the entire team can access the web folder at the same time.
- **Remote computing and business continuity:** Web folders are securely accessible over the internet from anywhere, supporting multiple offices and home-based workers. Temporary or part-time workers can be instantly activated at remote sites when there are increased workloads, environmental conditions, unexpected events, or failures.
- **No customer IT department provisioning:** Odyssey provides an outsourced solution that doesn't require any hardware or software to implement. All setup is done by Odyssey and is accessed directly from a user's PC with no need for IT resources to manage mailboxes on their own systems. This technology is faster, more reliably and more secure than email-based services or remote ftp mailbox retrieval.

- ▶ **Fax to Email:** Odyssey can provide toll-free fax numbers or you can use your own. We will forward your faxes directly to the email address specified for each fax number. Individuals send and receive faxes through their standard email client as attachments.

Our Inbound Fax Solution Takes An Innovative Approach To Route Your Inbound Fax Documents To A Secure, Web-Based Depository Or To Email Addresses.

The Odyssey Web Folder

- View complete details of all received faxes including the sender's fax number, date and time, number of pages
- Download and/or view selected faxes as PDF or TIFF files.
- Multiple users can access the web folder to process the received faxes.
- Each team member can have a user ID and password for additional security and accountability.
